

[Find out more](#) about optimizing SAP CO to realize return on your SAP investment.

REALIZE ROI BY OPTIMIZING SAP CO IMPLEMENTATION

Most enterprises and SMBs embarking upon ERP implementations typically have point systems capable of automating discrete transactions across their sales, materials, inventory, production and finance functions. When they decide to invest in an ERP, it is to gain comprehensive visibility of their end-to-end operations, obtain deeper insight into their costs, and realize other business goals that are beyond the scope of their point systems.

During the course of their ERP implementation, when faced with business and technology issues that are common to all big change initiatives, some companies step back, take a re-look at their implementation objectives, and, if required, rework their go live dates. Others prefer to secure their deadlines by reprioritizing the scope to cover only the critical go-live functionality. Sub-optimal / non implementation of the SAP CO module is very often the result of such an approach.

This explains why many companies are no further down the road into getting an exact grip of their costs and profitability despite having invested a huge amount of time and money in implementing an ERP system. Such implementations threaten the ROI of the whole SAP investment by failing to deliver even the most basic level of MIS / EIS.

Enter **SAP CO OPTIMIZATION** services from *Adroit Infotech*.

We help enterprises and SMBs alike to implement, extend or optimize their SAP CO module so that they not only realize the expected return on their SAP implementations but can actually catapult themselves to the next level of revenues and profits. Our SAP CO Optimization services comprise of:

- Due diligence study to identify current SAP CO solution vis-à-vis organizational goals and CO module capabilities
- Blueprinting for MIS fulfilment using CO and PA features
- Identification and sanitization of data sources through masters
- Finetuning SAP transactions by ensuring that the correct data flow into the relevant CO and PA buckets
- Development of CO-specific enhancements such as planned versus actual production costs, variance settlements, activity based costing, cost estimate runs, monitoring and controlling event specific costs, line of business / production facility / product wise revenues, costs and contributions
- Ongoing support to sustain the improved CO solution

With real-life SAP usage experience at large SAP user organizations, our CO consultants are able to configure CO in a manner that makes it practical for business owners to use it. As a certified SAP SERVICE PARTNER, we have access to the appropriate tools and methodologies and bring the required level of support from the entire SAP ecosystem to ensure success of your implementation. With close involvement of our top management, we run the extra mile.

Over the years, we have done several SAP CO module optimization engagements including some that virtually proved to be first time CO implementations. Our success stories include a leading pharmaceutical company that was able to win large international vaccine tenders aided by its competitive pricing that was made possible by the accurate handle it obtained on the overall costs supplied by the re-implemented CO module; an SMB forging shop that could improve profitability amid a manifold growth in revenues in an industry subjected to unilateral customer-driven prices that afforded slender margins over manufacturing costs; and a leading agricultural products enterprise that was able spot and rectify lacunae in its underlying material requirements and demand planning operations, thereby setting the stage for building a decision support system focused on overall costs across multiple production facilities.
