

[Know more](#) about how to unlock the full value of your SAP solution.

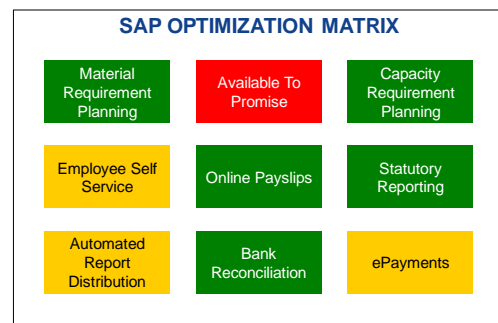

UNLOCK THE FULL VALUE OF YOUR SAP SOLUTION WITH ADROIT optiSAP

ERP solutions like SAP offer tremendous depth and breadth of functionality. This has fostered rapid adoption of such solutions on the one hand but has unintentionally introduced many implementation challenges on the other. To overcome these challenges, many first time implementations have eschewed the nuanced approach that a benefits-driven project charter calls for. In what has followed, many features have been implemented in a standardized manner by over-simplifying company-specific business processes, whereas others have been postponed to some undefined phase in the future.

It is no wonder then that despite using up a lot of time and money, many first time SAP implementations have not delivered full value to their customers. At best, they have merely automated transaction processing without providing much support for MIS or EIS and, at worst, some of them have stymied end user adoption with a mix of unwieldy, unusable and incorrectly implemented functionality. As a result, many SAP customers are compelled to buy expensive add on solutions to obtain functionality that is lying dormant in their existing SAP solutions or to continue with the use of costly human resources for carrying out mundane tasks.

The good news is, SAP customers can unlock the full value of their existing SAP solutions with **ADROIT optiSAP**. This offering includes:

- Due-diligence study to identify areas of improvement and prioritize them according to cost, benefit and potential for 'early win'
- Correction of incorrect functionality
- Usability improvements to boost adoption of dormant functionality
- Enhancement of previously unimplemented functionality
- Realignment of solution to match updated business needs

We are proud of our unique SAP optimization capabilities and our unmatched track record in this space.

With a powerful combination of product knowledge and domain expertise, we are able to strike the right balance between company-specific processes and industry best practices while configuring SAP. Since many of our consultants have been users in SAP customer organizations in the past, they are able to empathize with your SAP end users and overcome their understandable skepticism with optimization projects. As an SAP SERVICES PARTNER, we see every successful optimization project as an opportunity to bolster your company's reputation and safeguard the SAP brand image.

Over the years, we have executed several SAP optimization engagements successfully. Our enhancement of MRP, Demand Planning, Long Term Planning and other unimplemented functionality helped a consumer packaged goods company optimize its plant and manpower utilization. By boosting usability and correcting the enterprise solution definition, we transformed a agro products company's sub-optimal solution into a lighthouse SAP implementation for the entire industry. Aided by our optimization of its CO module, a leading pharmaceutical company was able to take better informed pricing decisions and consequently win many international tenders.
